1 String Algorithms

1.1 String Alignment

```

int pd[ms][ms];

int edit_distance(string &a, string &b) {
    int n = a.size(), m = b.size();
    for(int i = 0; i <= n; i++) pd[i][0] = i;
    for(int j = 0; j <= m; j++) pd[0][j] = j;
    for(int i = 1; i <= n; i++) {
        for(int j = 1; j <= m; j++) {
            int del = pd[i][j-1] + 1;
            int ins = pd[i-1][j] + 1;
            int mod = pd[i-1][j-1] + (a[i-1] != b[j-1]);
            pd[i][j] = min(del, min(ins, mod));
        }
    }
    return pd[n][m];
}

```

1.2 KMP

```

string p, t;
int b[ms], n, m;

void kmpPreprocess() {
    int i = 0, j = -1;
    b[0] = -1;
    while(i < m) {
        while(j >= 0 && p[i] != p[j]) j = b[j];
        b[++i] = ++j;
    }
}

void kmpSearch() {
    int i = 0, j = 0, ans = 0;
    while(i < n) {
        while(j >= 0 && t[i] != p[j]) j = b[j];
        i++; j++;
        if(j == m) {
            //ocorrencia aqui comecando em i - j
            ans++;
            j = b[j];
        }
    }
    return ans;
}

```

1.3 Trie

```

int trie[ms][sigma], terminal[ms], z;

void init() {
    memset(trie[0], -1, sizeof trie[0]);
    z = 1;
}

int get_id(char c) {
    return c - 'a';
}

void insert(string &p) {
    int cur = 0;
    for(int i = 0; i < p.size(); i++) {
        int id = get_id(p[i]);
        if(trie[cur][id] == -1) {
            memset(trie[z], -1, sizeof trie[z]);
            trie[cur][id] = z++;
        }
        cur = trie[cur][id];
    }
    terminal[cur]++;
}

int count(string &p) {
    int cur = 0;
    for(int i = 0; i < p.size(); i++) {
        int id = get_id(p[i]);
        if(trie[cur][id] == -1) {
            return false;
        }
        cur = trie[cur][id];
    }
    return terminal[cur];
}

```

1.4 Aho-Corasick

```

// Construa a Trie do seu dicionario com o codigo acima

int fail[ms];
queue<int> q;

void buildFailure() {
    q.push(0);
    while(!q.empty()) {
        int node = q.front();
        q.pop();
        for(int pos = 0; pos < sigma; pos++) {
            int &v = trie[node][pos];
            int f = node == 0 ? 0 : trie[fail[node]][pos];
            if(v == -1) {
                v = f;
            } else {
                fail[v] = f;
                q.push(v);
            }
            // juntar as informacoes da borda para o V ja q um match em V
            // implica um match na borda
            terminal[v] += terminal[f];
        }
    }
}

```

```

    }
}

int search(string &txt) {
    int node = 0;
    int ans = 0;
    for(int i = 0; i < txt.length(); i++) {
        int pos = get_id(txt[i]);
        node = trie[node][pos];
        // processar informacoes no no atual
        ans += terminal[node];
    }
    return ans;
}

```

1.5 Algoritmo de Z

```

string s;
int fz[ms], n;

void zfunc() {
    fz[0] = n;
    for(int i = 1, l = 0, r = 0; i < n; i++) {
        if(l && i + fz[i-1] < r)
            fz[i] = fz[i-1];
        else {
            int j = min(l ? fz[i-1] : 0, i > r ? 0 : r - i);
            while(s[i+j] == s[j] && ++j);
            fz[i] = j; l = i; r = i + j;
        }
    }
}

```

1.6 Suffix Array

```

namespace SA {
    typedef pair<int, int> ii;

    vector<int> buildSA(string s) {
        int n = (int) s.size();
        vector<int> ids(n), pos(n);
        vector<ii> pairs(n);
        for(int i = 0; i < n; i++) {
            ids[i] = i;
            pairs[i] = ii(s[i], -1);
        }
        sort(ids.begin(), ids.end(), [&](int a, int b) -> bool {
            return pairs[a] < pairs[b];
        });
        int on = 0;
        for(int i = 0; i < n; i++) {
            if (i && pairs[ids[i-1]] != pairs[ids[i]]) on++;
            pos[ids[i]] = on;
        }
        for(int offset = 1; offset < n; offset <= 1) {
            //ja tao ordenados pelos primeiros offset caracteres
            for(int i = 0; i < n; i++) {

```

```

    }
    return r;
}

```

2.2 BIT 2D

```

int bit[ms][ms], n, m;

void update(int v, int x, int y) {
    while(x <= n) {
        while(y <= m) {
            bit[x][y] += v;
            y += y&-y;
        }
        x += x&-x;
    }
}

int query(int x, int y) {
    int r = 0;
    while(x > 0) {
        while(y > 0) {
            r += bit[x][y];
            y -= y&-y;
        }
        x -= x&-x;
    }
    return r;
}

```

2.3 BIT 2D Comprimida

```

// by TFG
#include <vector>
#include <utility>
#include <algorithm>

typedef std::pair<int, int> ii;

struct Bit2D {
public:
    Bit2D(std::vector<ii> pts) {
        std::sort(pts.begin(), pts.end());

vi getLis() {
    int len = lis();
    int ans;
    for(int i = pos[lisArr[len - 1]]; i >= 0; i = bef[i]) {
        ans.push_back(arr[i]);
    }
    reverse(ans.begin(), ans.end());
    return ans;
}

```

7.2 Binary Search

```

int smallestSolution() {
    int x = -1;
    for(int b = z; b >= 1; b /= 2) {
        while(!ok(x+b)) x += b;
    }
    return x + 1;
}

```

```

int maximumValue() {
    int x = -1;
    for(int b = z; b >= 1; b /= 2) {
        while(f(x+b) < f(x+b+1)) x += b;
    }
    return x + 1;
}

```

7.3 Ternary Search

```

// R
for(int i = 0; i < LOG; i++){
    long double m1 = (A * 2 + B) / 3.0;
    long double m2 = (A + 2 * B) / 3.0;

    if(f(m1) > f(m2))
        A = m1;
    else
        B = m2;
}
ans = f(A);

// Z
while(B - A > 4){
    int m1 = (A + B) / 2;
    int m2 = (A + B) / 2 + 1;
    if(f(m1) > f(m2))
        A = m1;
    else
        B = m2;
}
ans = inf;
for(int i = A; i <= B; i++) ans = min(ans, f(i));

```

7.4 Random Number Generator

```

// mt19937_64 se LL
mt19937 rng(chrono::steady_clock::now().time_since_epoch().count());
// Random_Shuffle
shuffle(v.begin(), v.end(), rng);
// Random number in interval
int randomInt = uniform_int_distribution(0, i)(rng);
double randomDouble = uniform_real_distribution(0, 1)(rng);
// bernoulli_distribution, binomial_distribution,
// geometric_distribution
// normal_distribution, poisson_distribution, exponential_distribution

```

7.5 Submask Enumeration

```

for (int s=m; ; s=(s-1)&m) {
    ... you can use s ...
    if (s==0) break;
}

```

7.6 Java Fast I/O

```
import java.util.*;
import java.io.*;
// https://www.spoj.com/problems/INTEST/
class Main{
    public static void main(String[] args) throws Exception{
        Reader s = new Reader();
        PrintWriter out = new PrintWriter(new BufferedOutputStream(System.
            out));
        int n = s.nextInt();
        int k = s.nextInt();
        int count=0;
        while (s.hasNext()) {
            int x = s.nextInt();
            if (x%k == 0)
                count++;
        }
        out.printf("%d\n", count);
        out.close();
        s.close();
    }
    // fast io

```

8 Teoremas e formulas uteis

8.1 Grafos

Formula de Euler: $V - E + F = 2$ (para grafo planar)
 Handshaking: Numero par de vertices tem grau impar
 Kirchhoff's Theorem: Monta matriz onde $M_{i,i} = \text{Grau}[i]$ e $M_{i,j} = -1$ se houver aresta $i-j$ ou 0 caso contrario, remove uma linha e uma coluna qualquer e o numero de spanning trees nesse grafo eh o det da matriz

Grafo contem caminho hamiltoniano se:
 Dirac's theorem: Se o grau de cada vertice for pelo menos $n/2$
 Ore's theorem: Se a soma dos graus que cada par nao-adjacente de vertices for pelo menos n

Trees:
 Tem Catalan(N) Binary trees de N vertices
 Tem Catalan(N-1) Arvores enraizadas com N vertices
 Caley Formula: $n^{(n-2)}$ arvores em N vertices com label
 Prufer code: Cada etapa voce remove a folha com menor label e o label do vizinho eh adicionado ao codigo ate ter 2 vertices

Flow:
 Max Edge-disjoint paths: Max flow com arestas com peso 1
 Max Node-disjoint paths: Faz a mesma coisa mas separa cada vertice em um com as arestas de chegadas e um com as arestas de saida e uma aresta de peso 1 conectando o vertice com aresta de chegada com ele mesmo com arestas de saida
 Konig's Theorem: minimum node cover = maximum matching se o grafo for bipartido, complemento eh o maximum independent set
 Min Node disjoint path cover: formar grafo bipartido de vertices duplicados, onde aresta sai do vertice tipo A e chega em tipo B, entao o path cover eh $N - \text{matching}$
 Min General path cover: Mesma coisa mas colocando arestas de A pra B sempre que houver caminho de A pra B
 Dilworth's Theorem: Min General Path cover = Max Antichain (set de vertices tal que nao existe caminho no grafo entre vertices desse set)
 Hall's marriage: um grafo tem um matching completo do lado X se para cada subconjunto W de X, $|W| \leq |\text{vizinhosW}|$ onde $|W|$ eh quantos vertices tem em W

8.2 Math

Goldbach's: todo numero par $n > 2$ pode ser representado com $n = a + b$ onde a e b sao primos
 Twin prime: existem infinitos pares $p, p + 2$ onde ambos sao primos
 Legendre's: sempre tem um primo entre n^2 e $(n+1)^2$
 Lagrange's: todo numero inteiro pode ser inscrito como a soma de 4 quadrados

Zeckendorf's: todo numero pode ser representado pela soma de dois numeros de fibonnacis diferentes e nao consecutivos
 Euclid's: toda tripla de pitagoras primitiva pode ser gerada com $(n^2 - m^2, 2nm, n^2 + m^2)$ onde n, m sao coprimos e um deles eh par
 Wilson's: n eh primo quando $(n-1)! \bmod n = n - 1$
 McNugget: Para dois coprimos x, y o maior inteiro que nao pode ser escrito como $ax + by$ eh $(x-1)(y-1)/2$

Fermat: Se p eh primo entao $a^{(p-1)} \bmod p = 1$
 Se x e m tambem forem coprimos entao $x^k \bmod m = x^{(k \bmod (m-1))} \bmod m$
 Euler's theorem: $x^{(\phi(m))} \bmod m = 1$ onde $\phi(m)$ eh o totiente de euler

Chinese remainder theorem:
 Para equacoes no formato $x = a_1 \bmod m_1, \dots, x = a_n \bmod m_n$ onde todos os pares m_1, \dots, m_n sao coprimos
 Deixe $X_k = m_1 m_2 \dots m_n / m_k$ e $X_k^{-1} \bmod m_k = \text{inverso de } X_k \bmod m_k$, entao $x = \text{somatorio com k de 1 ate n de } a_k X_k (X_k^{-1} \bmod m_k)$
 Para achar outra solucao so somar $m_1 m_2 \dots m_n$ a solucao existente

Catalan number: exemplo expressoes de parenteses bem formadas
 $C_0 = 1, C_n = \text{somatorio de } i=0 \rightarrow n-1 \text{ de } C_i C_{(n-1-i)}$
 outra forma: $C_n = (2n \text{ escolhe } n) / (n+1)$
 Bertrand's ballot theorem: p votos tipo A e q votos tipo B com $p > q$, prob de em todo ponto ter mais As do que Bs antes dele = $(p-q)/(p+q)$
 Se puder empates entao $\text{prob} = (p+1-q)/(p+1)$, para achar quantidade de possibilidades nos dois casos basta multiplicar por $(p + q \text{ escolhe } q)$

Hockey-stick: Somatorio de $i = r \rightarrow n$ de $(i \text{ escolhe } r) = (n + 1 \text{ escolhe } r + 1)$
 Vandermonde: $(m+n \text{ escolhe } r) = \text{somatorio de } k = 0 \rightarrow r \text{ de } (m \text{ escolhe } k) * (n \text{ escolhe } r - k)$

Burnside lemma: colares diferentes nao contando rotacoes quando $m = \text{cores}$ e $n = \text{comprimento}$
 $(m^n + \text{somatorio } i=1 \rightarrow n-1 \text{ de } m^{\text{gcd}(i, n)})/n$

Distribuicao uniforme $a, a+1, \dots, b$ $\text{Expected}[X] = (a+b)/2$
 Distribuicao binomial com n tentativas de probabilidade p, X = sucessos:
 $P(X = x) = p^x * (1-p)^{(n-x)} * (n \text{ escolhe } x)$ e $E[X] = p*n$
 Distribuicao geometrica onde continuamos ate ter sucesso, X = tentativas:
 $P(X = x) = (1-p)^{(x-1)} * p$ e $E[X] = 1/p$
 Linearity of expectation: Tendo duas variaveis X e Y e constantes a e b, o valor esperado de $aX + bY = aE[X] + bE[Y]$

8.3 Geometry

Formula de Euler: $V - E + F = 2$
 Pick Theorem: Para achar pontos em coords inteiras num poligono $\text{Area} = i + b/2 - 1$ onde i eh o numero de pontos dentro do poligono e b de pontos no perimetro do poligono
 Two ears theorem: Todo poligono simples com mais de 3 vertices tem pelo menos 2 orelhas, vertices que podem ser removidos sem criar um crossing, remover orelhas repetidamente triangula o poligono
 Incentro triangulo: $(a(X_a, Y_a) + b(X_b, Y_b) + c(X_c, Y_c)) / (a+b+c)$ onde a = lado oposto ao vertice a, incentro eh onde cruzam as

bissetrizes, eh o centro da circunferencia inscrita e eh equidistante aos lados

8.4 Mersenne's Primes

Primos de Mersenne $2^n - 1$

Lista de Ns que resultam nos primeiros 41 primos de Mersenne:
2; 3; 5; 7; 13; 17; 19; 31; 61; 89; 107; 127; 521; 607; 1.279; 2.203;
2.281; 3.217; 4.253; 4.423; 9.689; 9.941; 11.213; 19.937; 21.701;
23.209; 44.497; 86.243; 110.503; 132.049; 216.091; 756.839;
859.433; 1.257.787; 1.398.269; 2.976.221; 3.021.377; 6.972.593;
13.466.917; 20.996.011; 24.036.583;
